SUMMARY

Third-year Computer Science student at LPU with a strong foundation in full-stack development and backend systems. I build production grade projects not tutorial clones. My work spans real-time infrastructure, observability tooling, and AI engineering. I think in systems how components connect, where things fail, and how to design for scale from the start. Currently seeking an internship where I can contribute to real engineering problems and grow alongside experienced engineers.

SKILLS

Languages:	C++, C, Python, JavaScript
Frontend:	Next.js, React.js, HTML5, CSS3
Backend:	Node.js, Express.js, REST APIs, JWT Authentication, WebRTC, Socket.IO, BullMQ
Databases:	MongoDB, MySQL, InfluxDB, Redis
Cloud & DevOps:	AWS, Docker, Render
Tools:	Git, GitHub, Postman, Thunder Client

PROJECTS

Lantern – Open Source Observability, Monitoring & Alerting Platform: [Live](#) Mar' 26

- Engineered a production-grade, **open-source APM platform** for Node.js - providing SRE-grade visibility into request latency, error rates, throughput, and system health across deployed services in real time.
- Designed a zero-overhead SDK middleware that batches and flushes metrics asynchronously via a BullMQ-backed Redis queue- guaranteeing collector response **under 10ms** regardless of traffic volume.
- Selected InfluxDB **for time-series metrics** ingestion - enabling millisecond-fast aggregation over 30 days of per-minute data, where general-purpose databases fail at scale.
- Built a configurable alerting engine supporting threshold rules across error rate, memory usage, and app-silence detection - dispatching email notifications with cooldown periods to prevent alert fatigue.
- Delivered a live analytics dashboard via WebSocket streaming -surfacing real-time RPM charts, endpoint performance tables **ranked by p95 latency**, and an error feed with exact status codes and timestamps.

Tech Stack: Node.js, Express.js, Next.js, InfluxDB, Redis, BullMQ, Socket.IO, MongoDB, Docker, JWT

Voxa – Real Time Collaborative Workspace: [Live](#) Jan' 26

- Architected a multi-user collaborative platform with infinite whiteboard (Fabric.js), live code editor (Monaco), and P2P voice — synchronized within **<50ms latency** using Socket.IO with custom render-throttling.
- Reduced redundant React **re-renders by ~70%** by decoupling high-frequency canvas state from the component tree, sustaining 60fps drawing during concurrent multi-user sessions.
- Engineered a WebRTC signaling server handling full ICE/SDP negotiation for zero-relay peer-to-peer audio, reducing infrastructure overhead vs. traditional media servers.

Tech Stack: MERN stack, Google OAuth, WebRTC, Socket.IO, Fabric.js, Monaco Editor

TRAINING

Data Structures & Algorithms by SkillStone: [Certificate](#) Aug' 25

- Completed 2 months of intensive training in data structures (arrays, linked lists, stacks, queues, trees, graphs) and algorithms using C++, focusing on time and space complexity analysis.
- Applied sorting, searching, and graph algorithms to real-world scenarios, strengthening ability to design efficient, optimized solutions under constraints.

CERTIFICATES & ACHIEVEMENTS

- The Bits and Bytes of Computer Networking by Google Coursera
- Solved **350+ DSA** problems across LeetCode, Codeforces, and GFG - strengthening problem-solving skills
- Maintaining a **93-day** active coding streak with a maximum streak of **187 days**, demonstrating consistency and disciplined daily practice.
- Selected as Contributor - GSSoC 2026 AI / Agents Track | OpenSource Track.

EDUCATION

Lovely Professional University

Bachelor of Technology - Computer Science and Engineering; **CGPA: 7.81**

Coursework: Operating Systems ,Computer Networks, DBMS, DSA

Priyadarshani Jr. College

Intermediate; **Percentage: 75.4%**

Priyadarshani international School

Matriculation, **Percentage: 70%**

Phagwara, Punjab
Aug'23 – Present

Pune, Maharashtra
Apr'21 - Mar'23

Pune, Maharashtra
